Supplements Meetab Approval and Certification

Our scientific team has evaluated and inspected the production methods, certificates of raw materials and the manufacturing plant of Meetab SRL's metabolomic supplements and we can verify that:

- They produce in a factory in accordance with the law authorized by the Ministry of Health
- Food *2006-Off.474ap-67*
- They use certified raw materials of superior quality
- They use raw materials that relate to the natural molecules of the active principles
- They avoid the use of synthetic additives; choice, however, that gives to their products a less pleasant taste
- Their products have been formulated based on the principles of metabolomics to facilitate the execution of precise metabolic pathways (metabolism of carbohydrates, intake of essential nutrients, free form amino acids, Krebs cycle, fatty acids)

For these reasons, E.I.Nu.M. (the European Institute of Nutritional Medicine) endorses these supplements as they are in line with the principles of Nutritional Medicine and Metabolomics.
